1) 

| Place Value Grid |  | Stem Sentence | Decimal |
| :---: | :---: | :---: | :---: |
| Ones | tenths | There are 0 ones |  |
|  | $00 \bigcirc \bigcirc$ | and 4 tenths. | 0.4 |

| Ones | tenths | There are 6 ones |  |
| :---: | :---: | :---: | :---: |
| $\bigcirc \bigcirc$ |  |  |  |
| ○○○○ |  | and 0 tenths. |  |

| Ones | tenths | There are 8 ones and 8 tenths. | 8-8 |
| :---: | :---: | :---: | :---: |
| $\begin{aligned} & 0000 \\ & 0000 \end{aligned}$ | $\begin{aligned} & 0000 \\ & 0000 \end{aligned}$ |  |  |

2) a) 3.6
b) 1.4
c) 5
3) a) $8+4=12$

Danka will therefore need 12 counters.
b)

4)

| Ones | tenths |
| :---: | :---: |
| Oscar's number is 9.7. |  |
|  | $00 \bigcirc 0$ |
|  |  |

1) 3 ones and 12 tenths represents 4.2 not 3.12. When you have more then 9 tenths, you need to regroup. 10 tenths are the same as 1.
2) a) $A, B$ and $D$ all represent $6.1 . C$ is the odd one out

| Ones | tenths |
| :---: | :---: |
| $\bigcirc \bigcirc \bigcirc \bigcirc$ | $\bigcirc \bigcirc \not Q \otimes$ |
|  | $\otimes \otimes \not \otimes \otimes$ |
|  | $\otimes \otimes \otimes \otimes$ |

because it represents 5.1.
b) You can make C into 6.1 by adding another counter.
3) You would need to add 5 more counters into the tenths column because 5 tenths add another 5 tenths makes ten tenths. Ten tenths is equivalent to one whole.
$0.5+0.5=1$

| Ones | tenths |
| :---: | :---: |
|  | OOOO <br> OOOO <br> 0 OO |$=$| Ones | tenths |
| :--- | :--- |
| O |  |

1) $0.8,1.7,2.6,3.5,4.4,5.3,6.2,7.1,8.0$
2) $4.6,3.7,2.8,1.9$ and 1 (equal to ten tenths)
3) The answer is 1.9 .

The method for solving problem:
Double $4.2=8.4$
$8.4-7=1.4$
$1.4+0.5=1.9$
4) This is true. When regrouped, 23 tenths is the same as 2 ones and three tenths (2.3).

If you add 2.3 to 6 , it makes 8.3. This proves that 8.3 is the same as six ones and twenty three tenths.
