

Systems in the Body: a Reminder

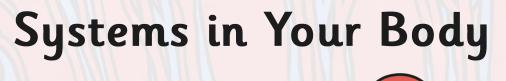

In Years 3 and 4, you may have learnt about a number of different systems in the body. We're going to begin by seeing how much you remember!

Picture of the System			
Name of the System	Skeletal System	Muscular System	Digestive System
Name at least 3 different parts of the system	Common bone names: skull, rib, rib cage, collar bone, ankle bones, upper arm bone, thigh bone, lower leg bone, finger bones, hand bones, shoulder blade, jaw, backbone, wrist, hips, knee cap, foot bones, lower arm bones, toe bones, breastbone. Scientific bone names: cranium, vertebral column, costal, thoracic cage, sternum, clavicle, talus, tarsals, humerus, femur, tibia, fibula, phalanges, metacarpals, scapula, mandible, carpals, pelvis, patella, metatarsals, radius, ulna Types of joints: hinge joint, ball and socket joint, gliding joint	Apart from the arm muscles, children may not know the scientific names of the muscles in the body. It is enough to identify them by locating them on the body. Biceps, Triceps (in the arm) Thigh (in the leg) Face muscles Back and stomach muscles Any other muscle or muscle group that demonstrates knowledge of the part of the body if not the muscle name	Mouth, tongue, teeth, salivary glands, oesophagus, stomach, duodenum, small intestine, large intestine, gallbladder, pancreas, liver, rectum, anus.
Does this system contain organs? If so, which ones?	No	No	Yes - e.g. stomach, small intestine, large intestine, liver, pancreas.
What is the purpose of the system?	Support the bodyGive the body shapeProtect the bodyEnable movement	Allow the body to moveGive control over movement	 Break down food into nutrients Extract water from food Excrete waste from the body

We have just reminded ourselves about the skeletal, muscular and digestive systems in the body.

Do you know any other systems in the body? You have 2 minutes to discuss with your talk partner before feeding back to the class.

Systems in Your Body

The system we will look at for the rest of this lesson is called the:

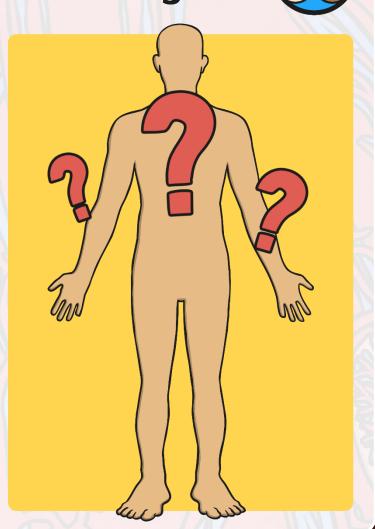

'Circulatory System'.

The word circulation means 'the movement to, fro or around something'.

Discuss the following questions with your talk partner:

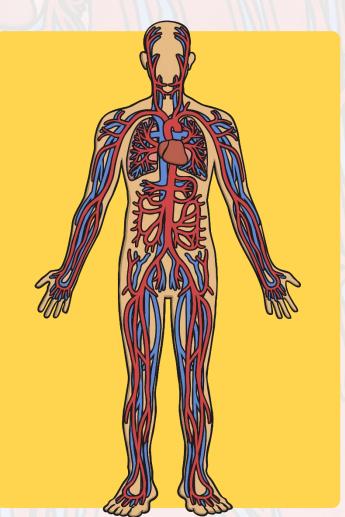

What does the system do?

What are the parts of the system?

The Circulatory System

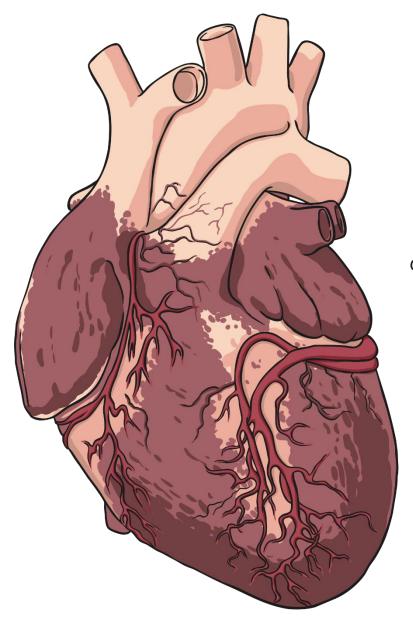

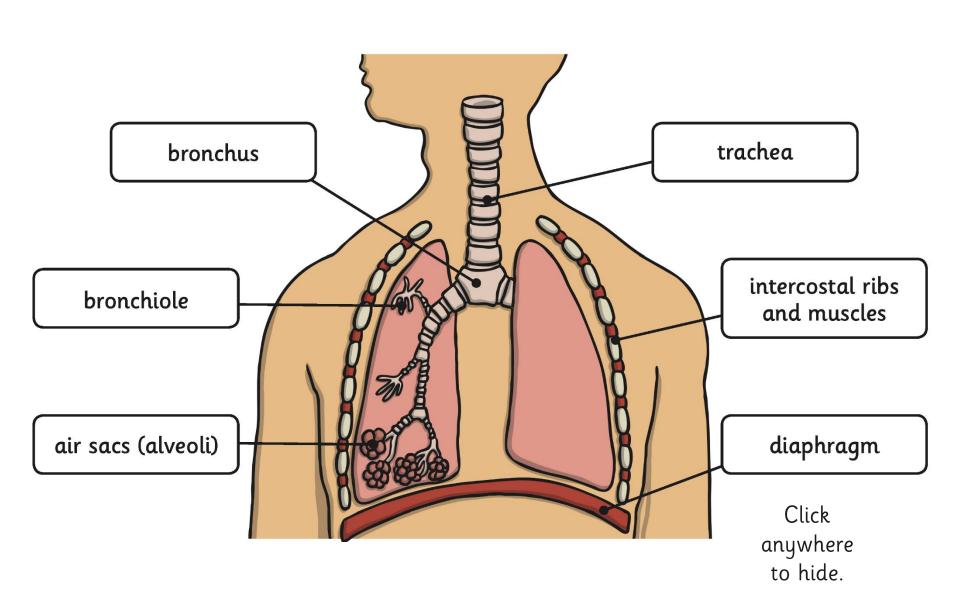

What can you see?

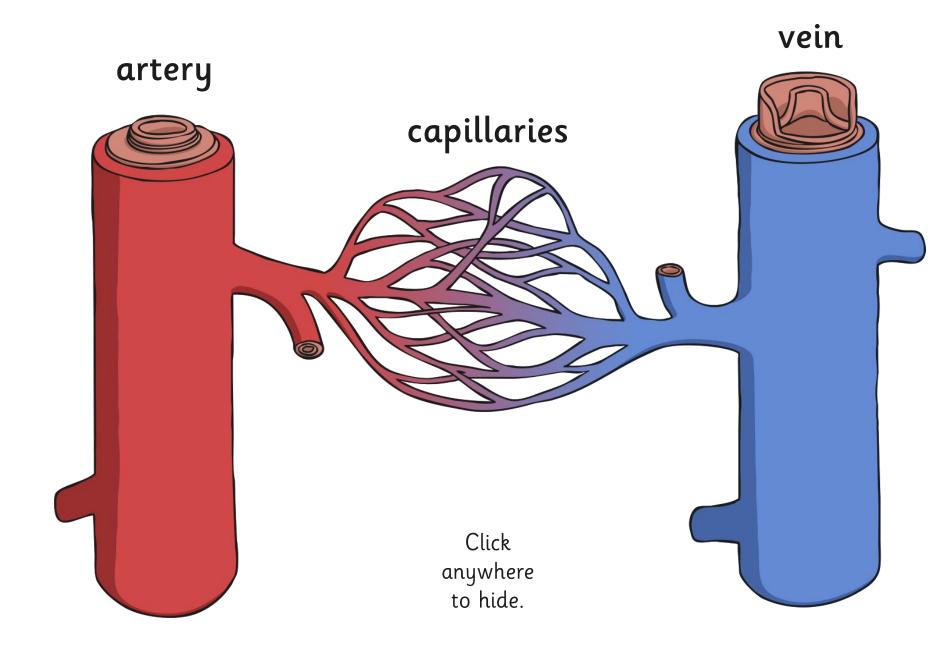

Is this what you expected?

Are there parts you did not expect to be in the circulatory system?

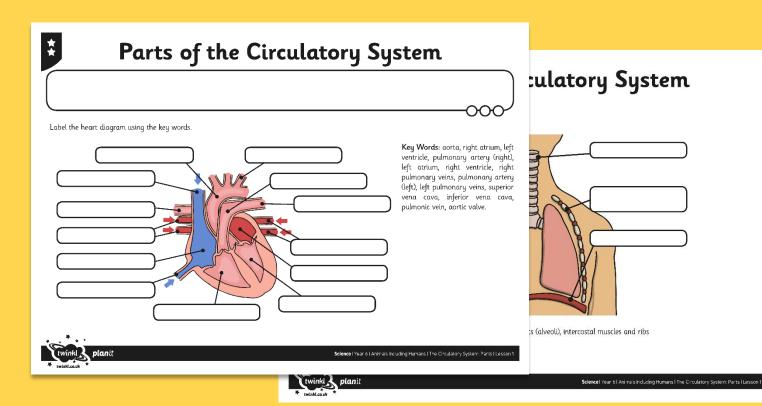

Click anywhere to hide.

Parts of the Circulatory System

Systems In The Body: Functions
